

ECOBULK

# DN 150 SCREW CAP WITH TWO G2" BUNGS

For more flexible use of  
dip tube systems.

**The new screw cap with two bungs was developed so that dip tube systems could also be used with "standard IBCs":**

- No need anymore for an additional 2" bung on the inner bottle
- Fully injection-moulded for maximum tightness
- Use of plugs with two seal caps possible

## Use of dip tube systems

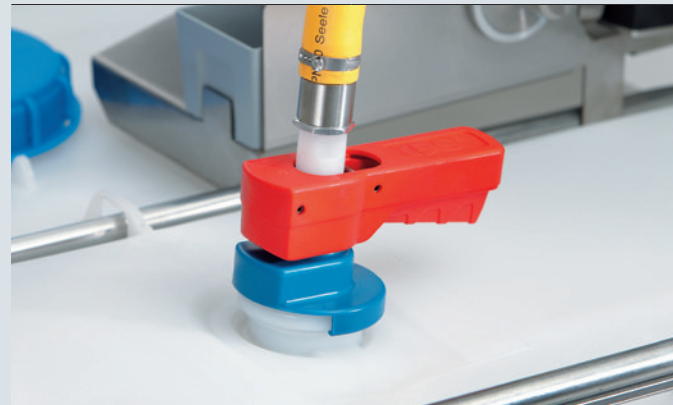

Special applications and filling goods require particularly safe and clean handling within a closed-loop production cycle:

- High-purity filling goods
- Aggressive substances
- Toxic liquids

## Conventional solution

Until now, only IBCs with special inner bottles could be fitted with dip tube systems:

Extra 2" bung on the top

## New flexible solution

The screw cap with two bungs permits simple retrofitting of dip tube systems:

For processes such as filling, emptying, mixing or gas blanketing in "standard IBCs", too
