**NEW!**

**Recommended when maximum safety is crucial.**

The double wall construction guarantees the highest safety and prevents the leakage of your filling product even under extreme conditions:

- Suitable for transport of flammable and combustible liquids (if storage according to NFPA 30 code is required: combustible liquids only)
- Especially recommended for sensitive filling products with a demand for extra protection
- Discharge through the dip-tube and/or a pump system
- Optional: Complete emptying through the back bung by tilting the container

Please do not hesitate to contact us regarding any technical concerns or questions. *Specific criteria for inside storage as required in NFPA 30 code must be considered.*
